

Wherever..... Whenever..... You Need.....

Vegetable Beef Soup

Now you can have hot soup anywhere anytime even with no electricity in less than 10 minutes.

READ DIRECTIONS - CAN RIM IS HOT DURING HEATING PROCESS

DIRECTIONS FOR USE

- Remove plastic cap and place on back of can.
- After spitz provided, place the three tubes through the top center rim of the can.
- Lift the ring to vent the pressure before pulling back to open can.
- After venting, immediately while the heat is heating, some absorption of the can is noted.
- Ready to eat in 7-9 minutes. Can be eaten directly from the can or may be served in a mug or on a plate.

CAUTION: Please look over rim to heat can all the top so contents and exposed top of can will be hot.

U.S. Patent Pending

HEATING TECHNOLOGY by Hottman

VEGETABLE BEEF SOUP

SO HOW DOES THIS CAN WORK?

You may be wondering what's going on inside the can. It's very simple, quite clever and, most important, perfectly safe. Surrounding the can of food is an outer can, which is a self-contained heating unit containing baked limestone - the same basic compound you might find in toothpaste or antacid and completely non-toxic. Above this is a water jacket, which, when pierced by the spitz, mixes with the limestone and starts a chemical reaction which generates heat. Your food is heated to a 160-180 degree eating temperature in 7-12 minutes.

INGREDIENTS:
Water, potatoes, carrots, beef, celery, peas, green beans, modified food starch, beef flavor (beef extract, maltodextrin, natural flavor, salt, autolyzed yeast extract), tomato paste, sugar salt, onion powder, acidic powder, caramel color.
