HEATING TECHNOLOGY by SunMeadow

CHICKEN NOODLE SOUP
SO HOW DOES THIS CAN WORK?

You may be wondering what's going on inside the can. It's very simple, quite clever and, most important, perfectly safe. Surrounding the can of food is an outer can, which is a self-contained heating unit containing heated limestone - the same basic compound you might find in tooth powder or antacid and completely non-toxic. Above this is a water jacket, which, when placed by the epko, mixes with the limestone and starts a chemical reaction which generates heat. Your food is heated to a 140-160 degree eating temperature in 9-12 minutes.

INGREDIENTS
Water, chicken, noodles, beef, carrots, egg whites, whole egg, starch, chicken, cornstarch, cellulose, lactic acid, calcium, sodium, modified food starch, onion, chicken flour, mechanically separated chicken, chicken broth, salt, natural flavors, citric acid, salt, onion powder, spices.
